Quarterly Cash Burn Rate: 18 Holdings

Each company's latest periodic SEC filing (10-Q, or interim 6-K for foreign filers). Data retrieved 2026-10-03 (system clock, UTC). $ in thousands; Addex (ADXN) in CHF thousands. Burn = net cash used in operating activities; positive = cash consumed.

* Position = your sheet's values. All 18 tie exactly (to the nearest $K) to cash & cash equivalents at period end in the same filings; Mynd.ai's is net of $220K restricted cash. Burn Rate uses only the latest filing: its year-to-date operating cash flow divided by the number of quarters it covers. Latest discrete qtr = the most recent three months alone (latest 10-Q YTD minus the Q1 10-Q, or a three-month figure the company published). "n/a" = the company publishes only half-year cash flows. ADXN in USD: about 784 per quarter at the H1-2026 average CHF/USD rate of 1.2706 (FMP data feed).

Method

1. Mapped each ticker to its SEC CIK (sec.gov company_tickers.json) and used the EDGAR submissions API to find the latest periodic report. For the 11 U.S. filers that is a 10-Q. The 7 foreign private issuers (ADXN, ATCX, EVGN, MYND, NCEL, NSRX, WAVE) file no 10-Q, so I used the 6-K carrying their interim financial statements for the six months to 2026-06-30.
2. Read the operating-cash-flow total from each filing's cash flow statement, under the filing's own label (listed in the calculation table below). Each value was matched to the filing's XBRL data. WAVE does not tag this line in XBRL, so I re-added its statement line items instead (they sum to 1,444).
3. Burn Rate = -(YTD operating cash flow) / (months in period / 3). For a six-month statement that is H1 / 2. OPTT's fiscal year ends April 30, so its latest 10-Q already covers a single quarter.
4. Latest discrete quarter = latest YTD minus the Q1 YTD from the prior 10-Q. For EVGN it comes from the Q2-2026 results release (6-K, 2026-08-18). ODYS reports its Q2 figure directly in the 10-Q, and that matches the subtraction.
5. I used total operating cash flow, including discontinued operations (EVGN: $300K in H1; NSRX: $41K), because that is the cash actually spent. Capex and other investing outflows are excluded.

Flags to review before you rely on this

Flag	Detail
Mixed period types	7 of 18 (ADXN, ATCX, EVGN, MYND, NCEL, NSRX, WAVE) report only half-year cash flows. Their Burn Rate is an H1 average, not a reported quarter. EVGN is the exception: it published a Q2-only figure (1,974).
Average vs. latest quarter	These diverge materially: TPST 5,189 avg vs 2,779 latest (Q1 alone was 7,598); INTZ 2,706 vs 3,590 (rising); KPRX 2,527 vs 1,892; QNRX 4,007 vs 3,144; AEON 3,167 vs 3,698; LINK 415 vs 286; EVGN 2,464 vs 1,974. Use the column that fits your purpose.
Different quarter-end	OPTT's latest 10-Q covers May-Jul 2026; everyone else's period ends 2026-06-30. OPTT's 10,240 compares with 5,605 in the same quarter a year earlier.
Currency	ADXN reports in Swiss francs. Both your Position (767) and its Burn Rate (617) are CHF thousands, not USD. In USD that is about 949 cash at the 2026-06-30 rate of 1.2371, and about 784 burn per quarter at the H1 average of 1.2706 (FMP feed).
Position excludes investments	KPRX also holds $9,762K of short-term investments, QNRX $6,954K of investments and NSRX a $4,000K short-term deposit. Cash / burn understates their runway.
Post-period financing	Not reflected in Position: ADXN raised USD 2.8M gross via its ATM (6-K, 2026-08-26). NCEL's 6-K reports about $1.4M gross raised in a July 2026 private placement.
Capex excluded	Material for INTZ (H1: $587K capitalized software, $55K equipment, $356K acquisition), MYND ($896K capex and capitalized software), ATCX ($191K capital assets) and CDIO ($110K patents and equipment). Add these if you want a free-cash-flow burn.
Company-defined burn	EVGN's Q2 release cites about $2.1M of Q2 "consolidated cash usage" and 2026 burn guidance of about $8.5-9.5M. Those are the company's own definitions; this table uses the statutory operating cash flow line instead.
Not available / not verified	No discrete Q2 cash flow exists in the filings of ADXN, ATCX, MYND, NCEL, NSRX or WAVE. The CHF/USD rate comes from a third-party data feed (FMP), not an official fixing. No figures were estimated.
