DRAFT FOR DISCUSSION · PREPARED 8 OCTOBER 2026 · NOT INVESTMENT ADVICE

Clean Energy Ventures × Eco Wave Power

High-level ideas for working together, and which CEV portfolio companies fit

Basis: public sources retrieved 8 Oct 2026, plus our notes from the 30 Sep 2026 introductory call. Every fact carries a source tag (e.g., [E4]); the source map and verification notes are at the end. Synergy ratings and ideas are our judgment, not sourced facts.

> **The constraint we are designing around**
>
> Clean Energy Ventures (CEV) said its fund is not set up to invest in public companies; it writes $2M–$8M lead or co-lead checks from seed to Series A/B [C1; S2]. Eco Wave Power (EWP) trades on Nasdaq as WAVE [E1]. So any collaboration has to run through CEV's portfolio companies, CEV's network and LPs, or private vehicles such as project companies.

Bottom line

1. **Lead with Noon Energy, already flagged as a synergy candidate on the call** [C1]. Noon sells storage that discharges for 100+ hours [P1], and Meta has reserved up to 1 GW / 100 GWh of it to give its AI data centers "24/7 clean, reliable power" [P4]. EWP is positioning wave power for coastal data centers [E4], and its output varies with sea conditions: its Jaffa Port pilot reported roughly 9–12 "operational days" a month over Dec 2025–Feb 2026 [E5]. Multi-day storage is the natural partner for that pitch.
2. **Add DG Matrix and Rebound Technologies to make it a package.** DG Matrix's Interport combines several power sources and batteries to feed data-center racks and microgrids [P5; P6]; Rebound stores cooling as ice, including for data centers [P7]. With Noon, they map onto EWP's own published coastal data-center concept, which pairs wave power with energy storage and advanced cooling [E7].
3. **Could EWP buy one? Not the best-fit companies, at least not now.** EWP's market value is about $34–37M and it held $8.4M of liquidity at 30 Jun 2026 [E17; E16; E4]. DG Matrix, Branch Energy and Noon each raised $28M–$60M in their latest disclosed round [P6; P9; P2]. EWP's board does hold shareholder authority to issue shares to enable acquisitions [E13], but a share deal at that scale would amount to a merger rather than a bolt-on (page 4).
4. **The quick wins need no capital:** Matt's offer to flag CEV LPs that invest in public markets and may be interested [C1]; introductions to Noon, DG Matrix and Rebound; and introductions to energy and shipping corporates in CEV's co-investor network, for example EDP Ventures, the venture arm of Lisbon-headquartered EDP, which is relevant to EWP's Porto, Portugal project [S1; P19; E4].
5. **Medium term: project finance.** CEV said it is exploring credit and project-finance vehicles [C1]. Funding an EWP project company, for example the 1 MW first phase of its 20 MW Porto concession [E4], would be a private investment and so fits CEV's mandate.

32 + 14	3 strong fits	~$34–37M	$8.4M
CEV companies screened: active + legacy [S1]	Noon Energy, DG Matrix, Rebound Technologies	EWP market value, 7 Oct 2026 close [E17; E16]	EWP total liquidity, 30 Jun 2026 [E4]

Five ways to work together

Ranked by value relative to effort. None requires CEV's fund to buy EWP shares.

Idea	What it looks like	Why it works	First step	Effort
1. "Wave + firm power" package with CEV companies	EWP, Noon (multi-day storage), DG Matrix (power conversion) and Rebound (cooling and thermal storage) co-develop a reference design for coastal data centers and port microgrids, co-apply for grants, then pilot at an EWP site.	Mirrors EWP's published concept of wave power plus cooling, digital twins, storage and workload management [E7]. EWP has opened talks with data-center developers [E4] and has a grant record (Innovate UK, EU Interreg) [E5]. Gives CEV companies a coastal and port channel.	CEV makes three introductions; a 30-day technical scoping call.	Low; weeks
2. CEV LP introductions	Matt reviews EWP's materials and flags CEV LPs that invest in public markets and may be interested, as he offered on the call [C1].	The only route that brings CEV-network capital into EWP's listed shares without touching CEV's fund mandate.	Send Matt and Maya the deck and links (the agreed next step) [C1].	Low; now
3. Project finance	A CEV credit or project-finance vehicle, which CEV said it is exploring [C1], funds specific EWP project companies.	An investment at the private project level. EWP is moving from pilots to megawatt scale (Porto 1 MW of a 20 MW concession [E4]; Rhode Island sites under discussion [E9]) and is already lining up equipment-lease finance (non-binding Wavefront LOI) [E10].	Agree milestone check-ins, e.g., Porto construction start or a first commercial U.S. project.	Medium; depends on CEV's vehicle
4. Network and deal-flow swap	CEV introduces EWP to co-investor corporates listed on its portfolio page, e.g., EDP Ventures, EPS Ventures, National Grid, ENGIE, Chevron Technology Ventures, ABB, Mitsubishi Heavy Industries [S1]. EWP refers ocean and blue-tech founders it meets (Israel Blue-Tech initiative, Rhode Island ocean ecosystem) [E4; E9].	EWP says it seeks partners among energy companies, utilities, ports and funds [E2]. EDP is headquartered in Lisbon [P19]; EPS Ventures' site is headed "Future of Shipping" [P20]. CEV's portfolio already includes Israeli company Nitrofix [S7], and EWP's operating company, Eco Wave Power Ltd., is in Tel Aviv [E1].	CEV names 2–3 corporates where it has a warm relationship.	Low; ongoing
5. Strategic M&A (EWP buys a CEV company or its assets)	EWP pays mainly in shares under its existing authority [E12; E13]; CEV gets an exit.	Would add storage or power-electronics capability to EWP. But the best-fit companies are larger than EWP on every disclosed measure (page 4).	Ask CEV whether any portfolio company is looking for a strategic home.	High; opportunistic

Two things to keep in mind

- EWP's live assets are still small: Jaffa is a pilot array that peaked at 56.7 kW in ~3 m waves, and the Port of Los Angeles unit is a demonstration that is not grid-connected [E5; E14]. Near-term pilots with CEV companies would be kW-scale; the bigger fit is EWP's megawatt-scale pipeline.
- Introductions of investors to a listed company (idea 2) should go through your firm's compliance process.

Portfolio screen: who fits

We reviewed all 32 active companies on CEV's portfolio page and its 14 legacy holdings [S1] (full list in Appendix A). We scored fit against EWP's published plans: power, cooling and energy storage for coastal data centers [E4; E7], a pilot microgrid for remote islands [E5], port and breakwater sites [E1], and the storage it is weighing at its Los Angeles demonstration site [E14]. Three companies fit strongly, four are worth a conversation, and the rest do not overlap with EWP's business.

Strong fits

Company	What it does	Why it fits EWP	Size and stage signals
Noon Energy Energy Storage · Palo Alto, CA [S1; P2] High	Battery that stores energy in carbon-based media using reversible solid-oxide fuel cells; 100+ hours of storage. Markets listed: data centers and grid, commercial and industrial, microgrids and islands [P1].	Turns variable wave output into firm, around-the-clock supply, the requirement Meta cited [P4]. Its microgrids-and-islands market overlaps EWP's Innovate UK consortium with Toshiba on a pilot microgrid for remote islands [E5]. CEV flagged Noon on the call [C1].	$28M Series A co-led by CEV [P2]. Meta reservation of up to 1 GW / 100 GWh; first 25 MW / 2.5 GWh pilot targeted for 2028 [P4]. In Jan 2026, raising its next round and preparing to manufacture [P3].
DG Matrix Grid [S1] High	Interport, a multi-port solid-state transformer that combines solar, batteries and the grid to feed data-center racks; microgrid and EV-fleet versions; plans for micro- and mini-grids in remote communities [P5; P6].	The power-conversion layer that a wave, storage and grid site needs, whether a port microgrid or a coastal data center. DG Matrix and EWP's U.S. subsidiary are both in NVIDIA's Inception program [P5; E8].	$60M Series A in Feb 2026, led by Engine Ventures, with CEV participating [P6].
Rebound Technologies Buildings · Commerce City, CO [S1; P7] Medium–High	Stores cooling as ice (IcePoint® / AgileEnergy™) and releases it on demand; applications include data centers, food processing, aquatics and turbine inlet cooling [P7].	EWP's coastal data-center concept explicitly includes advanced cooling [E7]. Thermal storage can shift cooling load to when wave power is available (our inference).	Strategic round led by Taronga Group (Feb 2026, size not disclosed) and $2M from KCC Manufacturing (Apr 2026) [P21; P22].

Worth a conversation

- **Branch Energy** Medium–Low — "Arc" battery about the size of a parking space; $33M Series B co-led by Piva Capital and CEV (Sep 2026); expanding from Texas to Illinois, citing data-center demand [P9]. Its current product is sold to Texas commercial customers [P8], so there is no site overlap with EWP today. Revisit if Branch enters coastal markets.
- **Aqua Membranes** Medium–Low — reverse-osmosis elements with 3D-printed spacers that cut energy use (CEV: up to 30%) [S1; P11]. Wave-powered desalination would be new for EWP (no desalination mention in our scan of its 2025–26 releases [E15]), though its concept describes an "energy-water-compute ecosystem" [E7].
- **Cleartrace** Medium–Low — data platform for electricity and certificate transactions, positioned around 24/7 carbon-free energy [P12]. Could help EWP prove hour-by-hour clean-power attributes to data-center buyers.
- **Ayrton Energy** Low — stores hydrogen as a liquid at ambient conditions [P13]. Relevant only if EWP moves into port hydrogen; no hydrogen mention in our scan of its 2025–26 releases [E15].

Storage names ruled out: Branch for now (geography, above) and Quidnet Energy, a legacy pre-fund holding whose website says Hunt Consolidated acquired its storage technology [S1; P17].

Could EWP buy a CEV portfolio company?

Possible in principle, but the size math rules out the best-fit companies today.

EWP (Nasdaq: WAVE)

Measure	Value	Source
Share price, 7 Oct 2026 close	$5.90 per ADS	E17
Market value: FMP figure / post-June-2026 share count[1]	$34.5M / $36.8M	E16; E17
Total liquidity, 30 Jun 2026	$8.4M	E4
Net loss, H1 2026	$1.67M	E4
June 2026 raise	$4.0M at $10.00/ADS	E4
Price change since that raise[2]	−41%	E4; E17

Best-fit CEV companies: latest disclosed round

Company	Latest disclosed round	vs. EWP value[3]
DG Matrix	$60M Series A, Feb 2026 [P6]	≥ 1.6×
Branch Energy	$33M Series B, Sep 2026 [P9]	≥ 0.9×
Noon Energy	$28M Series A [P2]	≥ 0.8×
Rebound Technologies	$2M strategic (Apr 2026), plus a Taronga-led round (Feb 2026) of undisclosed size [P21; P22]	n/a

[1] $5.90 × 6,239,664 ADS-equivalents outstanding after the June offering (49,917,308 shares ÷ 8 shares per ADS) [E16]; ignores treasury shares and warrants. [2] $5.90 ÷ $10.00 − 1. [3] Round size ÷ $36.8M. Shown as "≥" because a company's post-money valuation is at least the cash raised in that round; actual valuations are not public.

What it means

- **Cash deal: not feasible for the best-fit names.** EWP's $8.4M is smaller than each of those rounds and covers roughly 2.5 years of losses at the H1 2026 pace ($8.4M ÷ ($1.67M × 2); net loss used as a rough proxy for cash burn) [E4].
- **Share deal: allowed, but it would be a merger.** On 30 Jun 2026, shareholders authorized the board, until the 2027 AGM, to issue shares, payable in kind, "in order to enable acquisitions" [E12; E13]. At these sizes the target's investors could end up owning a large part of EWP, which raises dilution, governance and listing questions. CEV would also be paid in a thinly traded small-cap stock (average volume ~55,400 ADSs a day) [E17], a fund-policy question for CEV.
- **Where M&A could work:** a small tuck-in (a team, IP licence or assets) from a company that is not scaling, or a later combination once EWP's commercial projects are announced. Ask CEV which companies would welcome that.

Suggested follow-up agenda

With Matt Cohen and Maya Bhat (CEV)

Matt was promoted to Investment Partner on 7 Oct 2026 [S4].

- Intros to Noon, DG Matrix and Rebound: who owns each relationship?
- LP intros: which LPs buy public equities; what they need to see [C1].
- Project finance: timing, ticket size and geographies [C1].
- M&A: anyone seeking a buyer? Would CEV take listed shares?
- Network: warm intros to EDP Ventures and other corporates [S1; P19].

With Inna Braverman (EWP)

- Which sites need storage, power conversion or cooling in the next 12–24 months, and at what size?
- Could a CEV portfolio company join EWP's discussions with data-center developers [E4]?
- Appetite and criteria for share-based acquisitions.
- Grant calls suited to a joint EWP + CEV-company bid.

Appendix A — Full CEV portfolio screen

Company list, categories and one-line descriptions from CEV's portfolio page [S1] unless noted. Fit: **High** directly serves EWP's published plans; **Medium** plausible but needs a new application or market; **Low** tangential; **None** no meaningful overlap.

Company	CEV category	What it does	Fit	Note
Noon Energy	Energy Storage	Carbon-oxygen battery that stores energy for days without critical minerals	High	See page 3
DG Matrix	Grid	Power Router platform that eases grid constraints for distributed energy	High	See page 3
Rebound Technologies	Buildings	Thermal storage and freezing technology for data centers, cold chain and HVAC	Med–High	See page 3
Branch Energy	Grid & Storage	Parking-space-sized battery systems for commercial buildings; backup power plus grid capacity	Med–Low	Texas, expanding to Illinois [P8; P9]
Aqua Membranes	Water	3D-printed spacers cut reverse-osmosis energy costs up to 30%	Med–Low	Desalination would be new for EWP
Cleartrace	Carbon & Minerals	Meter-level tracking of 24/7 carbon-free energy	Med–Low	Service partner for data-center sales
Ayrton Energy	Grid & Storage	Liquid organic hydrogen carriers store and move hydrogen at ambient conditions	Low	Only if EWP pursues port hydrogen
Transaera	Buildings	Air conditioning using ~40% less energy	Low	Building and warehouse cooling focus [P10]
REsurety	Software (pre-fund)	Analytics to price and manage the risk of variable clean energy	Low	Possible offtake pricing support [P14]
Evari	Buildings	Turbocompressor for electric heating and cooling equipment	Low	Heat-pump component [P15]
LineVision	Grid	Grid-enhancing technology adds up to 60% transmission capacity	Low	Transmission scale; EWP's Porto link is via distribution operator E-REDES [E5]
ConnectDER	Grid	Utility meter as an integration point for distributed energy	Low	Grid edge
NexDash	Transportation	AI platform to electrify ground freight	Low	Website returned HTTP 404 on 8 Oct 2026 [P18]
Boston Materials	Materials	CEV: magnetically aligned carbon-fiber composites. Company site now: thermal-interface materials for AI/HPC chips [P16]	Low	Description mismatch noted
Nitrofix	Industrial	Ambient-temperature electrochemical ammonia	Low	Israeli company [S7]; ecosystem link only
Advanced Ionics	Fuels & Generation	Electrolyzers using industrial waste heat for low-cost green hydrogen	Low	
SunDensity	Fuels & Generation	Photonic coating raises solar output up to 20%	Low	
Ndustrial	Industrial	Energy-intensity platform for industrial operators	Low	
Electrified Thermal	Industrial	Industrial heat up to 1800°C from clean electricity	None	Co-investor EDP Ventures (idea 4)
Nth Cycle	Critical Minerals	Modular critical-minerals refining	None	
OXCCU	Fuels & Generation	Single-step process for lower-cost sustainable aviation fuel	None	
Travertine	Carbon	Turns mine waste into phosphoric and sulfuric acid using captured CO_2	None	
Carbon Upcycling	Carbon	Turns CO_2 into low-carbon cement additives	None	

Company	CEV category	What it does	Fit	Note
Pearl	Buildings	Certification of energy-efficient homes	None	
Volexion	Materials	Atomically thin cathode coatings for EV batteries	None	
Aepnus	Industrial	Electrolysis that electrifies chemical manufacturing	None	
Lithios	Critical Minerals	Electrochemical lithium extraction from brine	None	
MacroCycle	Materials	Upcycles PET and polyester waste	None	
Queens Carbon	Carbon	Hydrothermal cement with 70% lower CO_2	None	
Exterra Carbon Solutions	Carbon	Turns asbestos mine tailings into CO_2 storage and mineral feedstocks	None	
Hertha Metals	Industrial	One-step green steel and high-purity iron from low-grade ore	None	
FutureProof	Adaptation & Resiliency	AI catastrophe modeling for climate-exposed homes	None	

Legacy holdings (14), not actionable: 11 already acquired — 7AC Technologies (Emerson), Pika Energy (Generac), MyEnergy (Nest), eQuilibrium (EnerNOC), Purpose Energy (Quinbrook), WeSpire (Bonterra), Solantro (HUADA), Zagster (Superpedestrian), Powerhouse Dynamics (Middleby), Bodhi (OneEthos), SparkMeter (Honeywell). Three labelled “Pre-Fund Portfolio”: Quidnet Energy (its site says Hunt Consolidated acquired its storage technology [P17]), CleanFiber and VoltServer (not assessed) [S1].

Appendix B — EWP fact sheet

Item	Fact	Source
Listing	American Depositary Shares on the Nasdaq Capital Market, ticker WAVE; 1 ADS = 8 common shares	E1; E16
Entities and offices	Eco Wave Power Global AB (Stockholm); Eco Wave Power Ltd. (Tel Aviv); Eco Wave Power U.S. (Miami)	E1
Management	Inna Braverman, Founder and CEO (CEO since 2019); Aharon Yehuda, CFO (since 2020)	E3; E4
Board (re-elected 30 Jun 2026)	Mats Andersson (Chair), David Leb, Annath Abecassis, Inna Braverman, Gilles Amar, Hilary E. Ackermann	E13
Technology	Floaters on breakwaters, jetties and piers create hydraulic pressure that drives a land-based generator; no seabed connection	E1; E5; E14
Business model	Can structure projects as BOO, BOT, BOOT, BLT or BLOT; can also partner via joint-venture companies, licensing, OEM and O&M agreements	E2
Israel: Jaffa Port	EWP-EDF One, grid-connected pilot selling to Israel Electric Corporation under a PPA; zero downtime since the start of 2025; peak 56.7 kW in ~3 m waves and ~2,000 kWh over ~9 operational days (Feb 2026)	E4; E5
U.S.: Port of Los Angeles	Pilot with AltaSea and Shell Marine Renewable Energy, launched 9 Sep 2025; capital cost under $1M; final report submitted to Shell Mar 2026. Not grid-connected; if grid access is not feasible, EWP is "considering solar panels and/or energy storage" to replace a generator	E5; E14
U.S.: Rhode Island	Sites identified in a feasibility study with Shell Marine Renewable Energy; CEO site visit and talks with state authorities planned for Sep 2026	E9
Portugal: Porto	1 MW first phase of a 20 MW concession with port authority APDL; breakwater damaged in a Mar 2026 storm; APDL reinforcement works underway	E4; E5
Taiwan: Suao Port	Partner I-Ke (a Lian Tat subsidiary) buys a 100 kW turnkey unit; port work permits expected by Oct 2026	E4; E5
India: BPCL	Non-binding MoU (Feb 2025); site assessment, then a 100 kW pilot at BPCL's Mumbai Oil Terminal	E5
South Africa: Ngqura	Feasibility study indicates ~8.3 MW of potential capacity	E11
Stated pipeline	404.7 MW (company figure)	E1
AI and data centers	Wholly owned Eco Wave Power U.S. Inc. joined NVIDIA Inception (May 2026) and is to be the company's AI hub; talks begun with data-center developers; exploring a wave-powered coastal data-center concept and grant bid with Florida Atlantic University and the University of Michigan	E4; E7; E8
Financing partner	Non-binding LOI with Wavefront Asset Management for equipment financing and leasing (36-month initial term)	E10
FY2025	Operating expenses $3.15M; cash and short-term deposits $6.3M at year-end	E5
H1 2026	Operating expenses $1.45M; net loss $1.67M; total liquidity $8.4M at 30 Jun 2026 ($8.15M cash plus $0.25M restricted deposits)	E4
June 2026 raise	$4.0M registered direct offering to a single institutional investor: 400,000 ADSs at $10.00, plus warrants for 300,000 ADSs at $12.00 expiring 26 Jun 2029; placement agent Maxim Group LLC	E4; E16
Shareholder authorities	Approved 30 Jun 2026, valid to the 2027 AGM: issue shares, warrants or convertibles, including for payment in kind and "in order to enable acquisitions"; buy back shares (company holding capped at 10%) and transfer own shares, including in connection with acquisitions	E12; E13

Verification notes and unverified items

- **CEV's private-only constraint and $2M–$8M check size** come from our 30 Sep call notes [C1]. CEV's website lists Seed to Series B stages [S2] but does not use the words "private only".
- **"Matt" and "Maya"** appear by first name only in the call notes. We matched them to Matt Cohen and Maya Bhat from CEV's team page and news posts [S4; S5]. CEV's team page still showed Matt Cohen as "Principal" on 8 Oct 2026, a day after the promotion post.
- **CEV's credit/project-finance vehicle** is from the call notes only; a web search on 8 Oct 2026 found no public announcement.
- **EWP market value moves daily.** FMP's $34.5M matches $5.90 × the pre-June-2026 share count (5,839,664 ADS-equivalents), so it appears not to include the June offering; our $36.8M uses the post-offering count from the 424B5 and ignores treasury shares and warrants.
- **EWP company statements:** the 404.7 MW pipeline, project timelines (e.g., Taiwan permits by Oct 2026) and data-center talks are EWP statements, several of them forward-looking; some underlying agreements are non-binding (BPCL MoU, Wavefront LOI) [E5; E10].
- **Excluded on purpose:** statements EWP made on the 30 Sep call that we could not find in its public disclosures were left out of this memo.
- **Noon's Series A date:** the CEV-hosted release carries a dateline of 18 Jan 2022, while Latitude Media dates the round to late 2022. We cite the amount and leads only.
- **Rebound:** the size of the Taronga-led Feb 2026 round is not disclosed [P21]; Rebound's total capital raised is not stated in the sources we read.
- **Branch Energy:** CEV lists the $33M item on 15 Sep 2026 and Latitude Media's page shows 22 Sep 2026. CEV's headline wording ("AI power in weeks, not years") was not traced to Branch's own release.
- **Websites we could not read directly:** Transaera returned HTTP 403 (description taken from CEV's page and release [S1; P10]); NexDash returned HTTP 404, so its operating status is unverified.
- **Boston Materials:** CEV's description (composites) differs from the company's current site (thermal-interface materials for chips); we used the company site.
- **DG Matrix headquarters** could not be confirmed (its About URL returned 404); not used.
- **Funding figures** are latest disclosed rounds, not valuations. Post-money valuations of the CEV companies are not public.
- **Judgment calls:** fit ratings, the five ideas, the M&A assessment, and the inference that thermal storage can shift cooling to match wave output are our analysis, not sourced facts.
